

The diagram illustrates the structure of a plant cell. At the top, a dashed blue line represents the cell wall. Below it, a solid blue line represents the nucleus. The cytoplasm is shown as a light blue area. The cell wall is composed of cellulose fibers, which are represented by a zigzag line. The nucleus is a large, dark blue oval. The cytoplasm is filled with various organelles, including mitochondria (represented by small, bean-shaped structures) and chloroplasts (represented by green, oval structures). The diagram is labeled with 'Cell Wall', 'Nucleus', and 'Cytoplasm'.

**Cell Wall**
