

# Where to put your cultures??

## Refrigerator:

- If you want to stop their growth
- If you want to save them for something later
- If they are still sterile

## In the Incubator:

- If you just Inoculated the culture
- If you need them to grow

## The Trash Can

- If they are a plate or pipette that you are done with.
- If it is something that has been contaminated during the lab (pipette, swab)

## In a Tray for disposal:

- If it is contaminated glassware that you are done with.
- If it is a test tube that you are done with.

**When in doubt, put it in the fridge!!**
